## Anecdote 1 – From 2010

54y old diagnosed with type 2 diabetes

**BMI 26.5; HbA<sub>1c</sub> 6.5%; Fasting glucose 7.2**

“I do not want this. How can I get rid of it?”

**Advice.**

	<i><u>BMI</u></i>	<i><u>HbA<sub>1c</sub></u></i>	<i><u>FBG</u></i>
<b>6 mo</b>	<b>20.2</b>	<b>5.5</b>	<b>4.9</b>
<b>1y</b>	<b>19.4</b>	<b>5.3</b>	<b>4.8</b>
<b>6y</b>	<b>19.4</b>	<b>5.4</b>	<b>4.9</b>

**2013**

**Weight 126kg**

**HbA1c 9.2%**

**2014:**

**Weight 94kg**

**HbA1c 6.2%**

**2017**

**Weight 83kg**

**HbA1c 5.7%**

**Reid code when the processes underlying T2DM  
have been reversed?**

~~Diabetes resolved~~

~~21263 or 212H~~

**Diabetes in remission – C10P**

# Current definition of diabetes

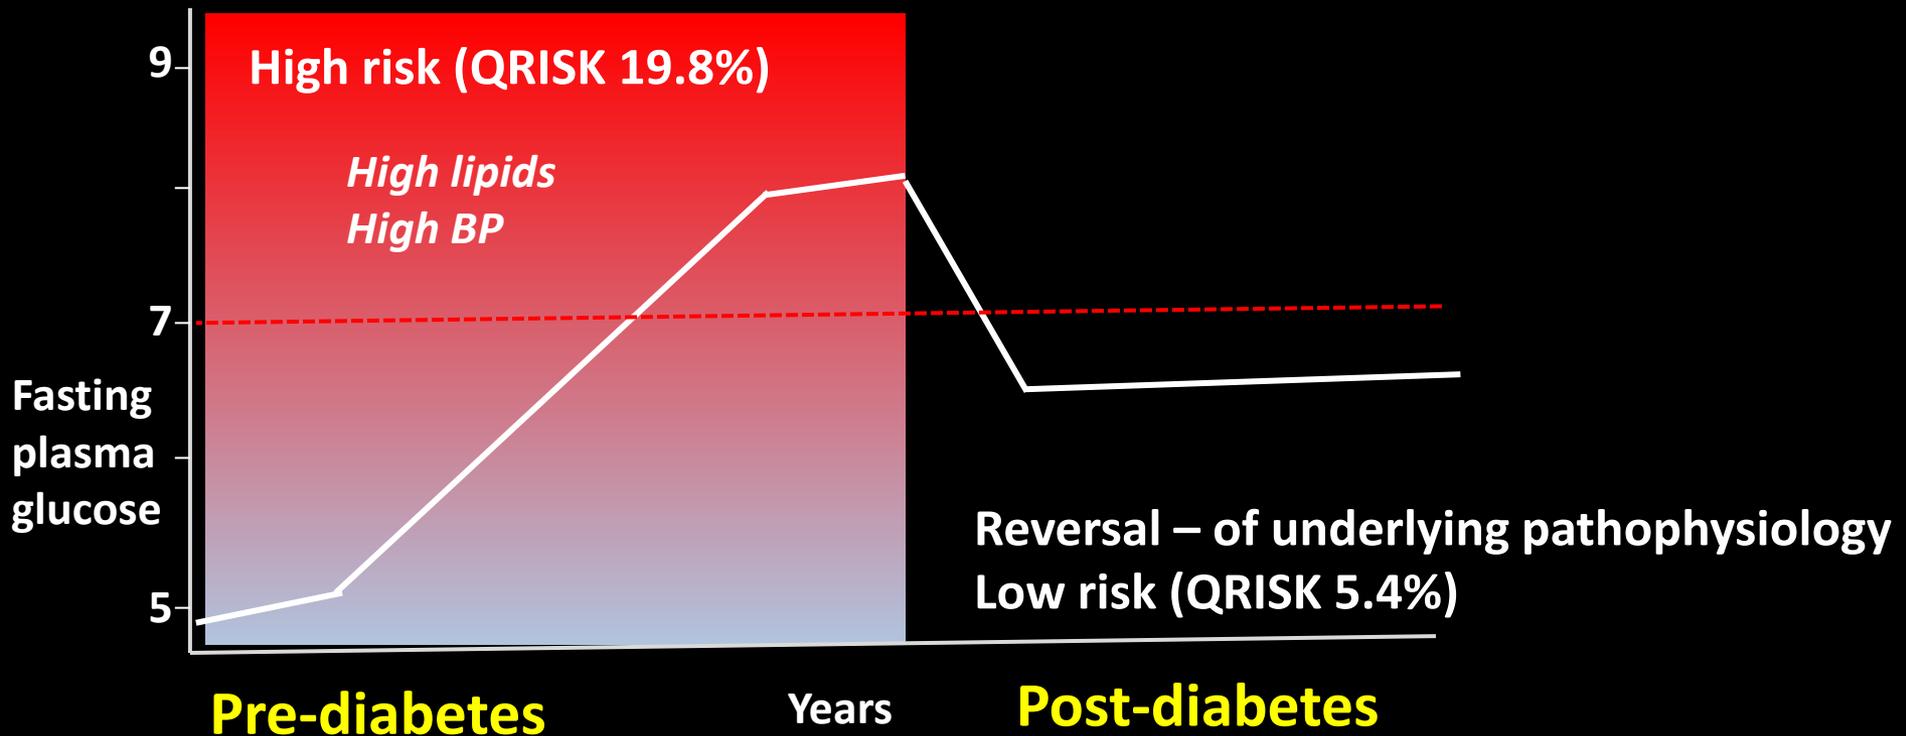

ADA 1997 and WHO 1999

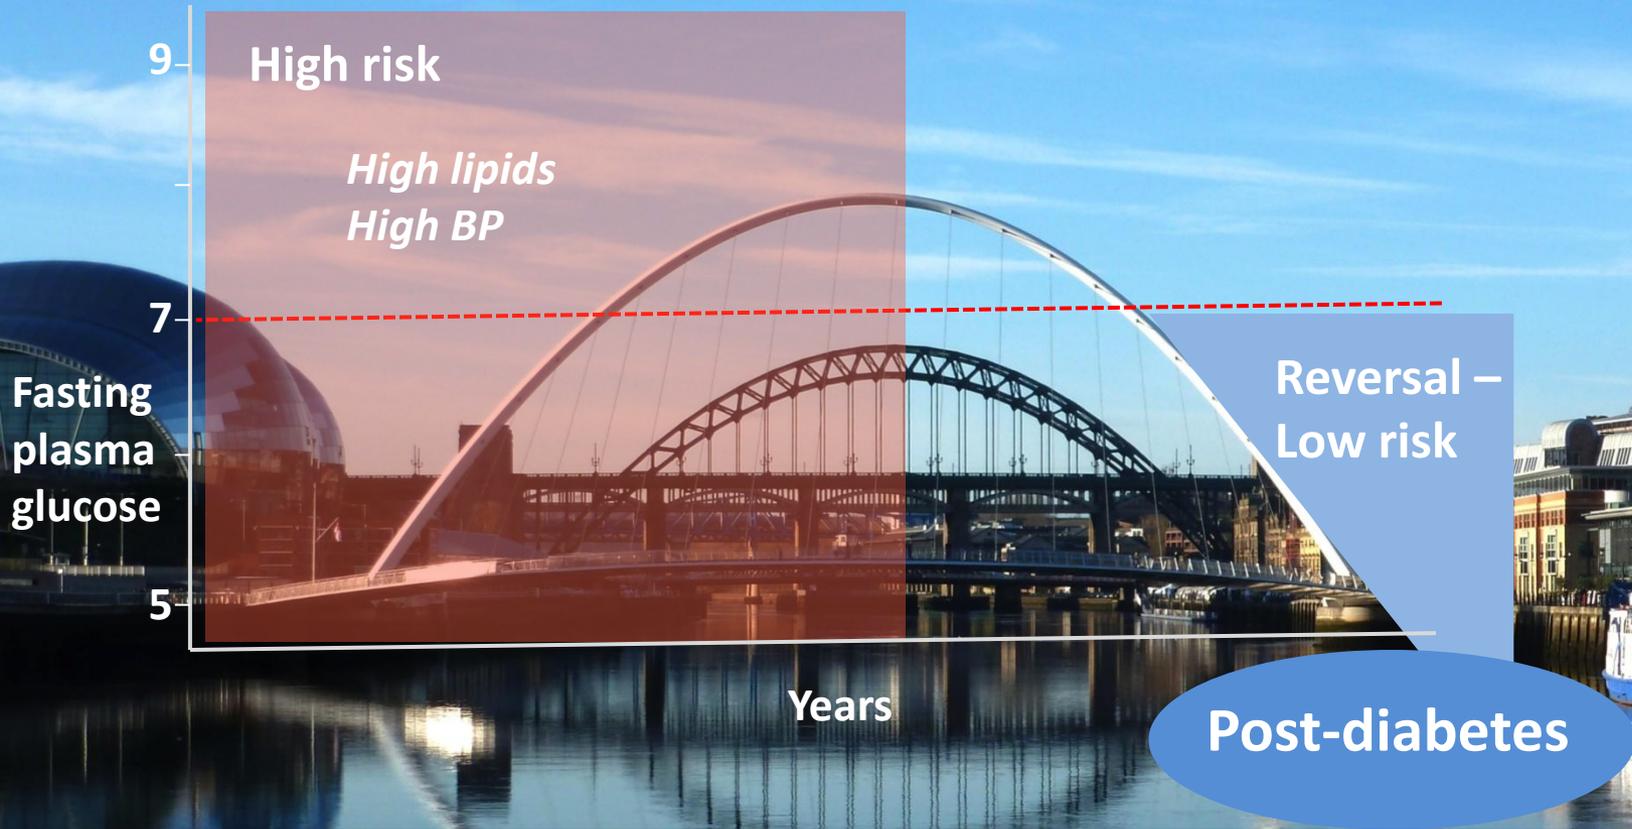

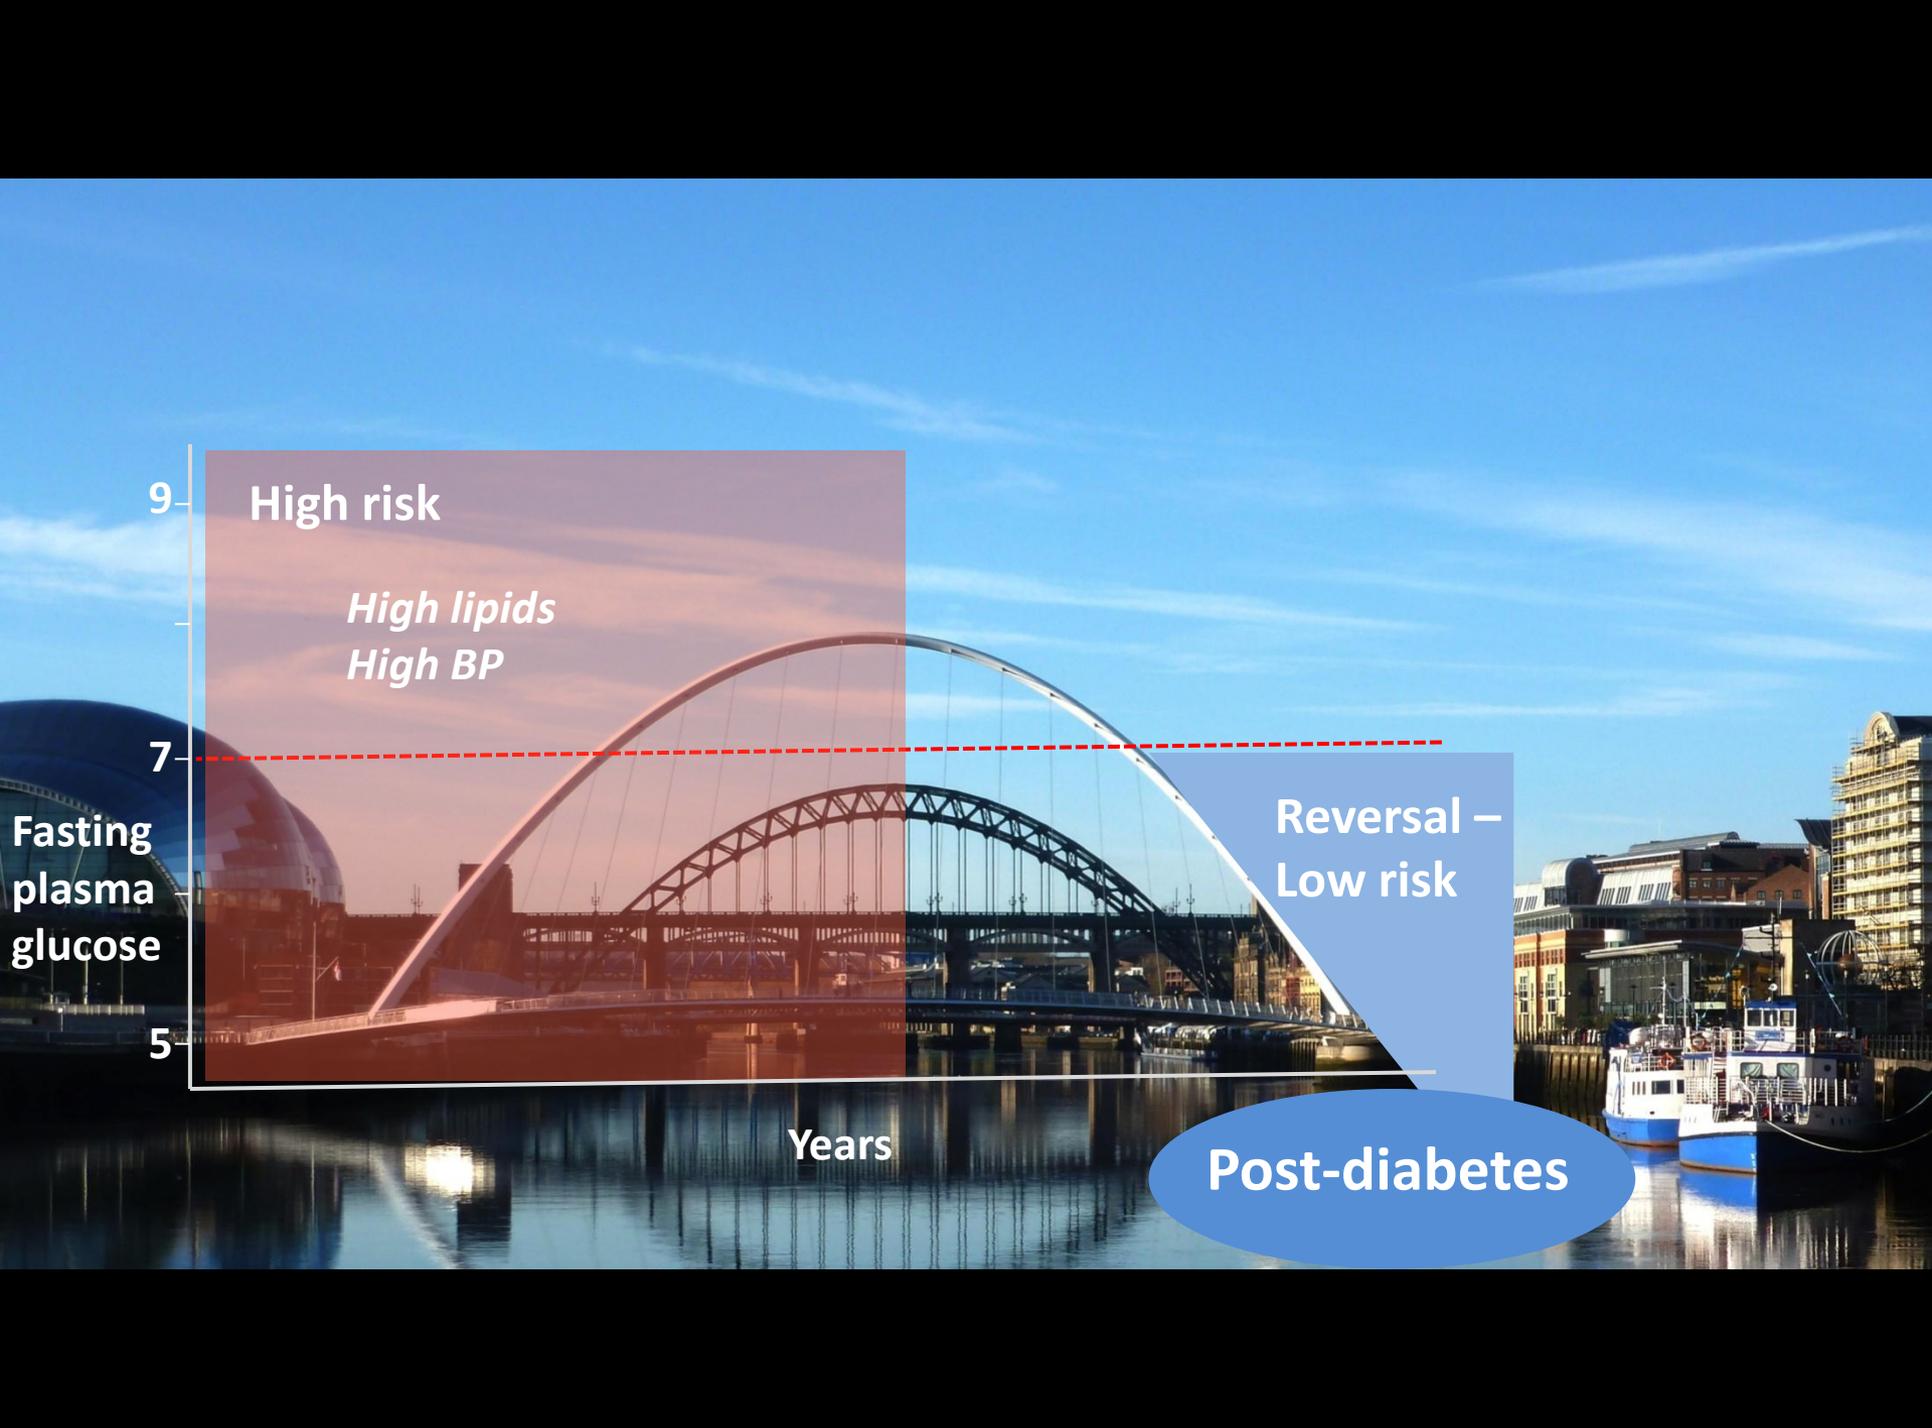

Fasting venous plasma glucose  $\geq 7.0$  mmol/l

or

HbA1c  $\geq 6.5\%$  ( $\geq 48$ mmol/mol)

# Pre-diabetes, diabetes and post-diabetes

## Defining remission of diabetes

Fasting venous plasma glucose  $<7.0$  mmol/l

HbA1c  $<48$ mmol/mol ( $<6.5\%$ )

Two non-diabetic test results, at least 2 months apart  
then reviewed annually

# Benefits of coding remission of diabetes

## *For patients*

- Motivates maintenance of substantial weight loss
- Removes stigmatisation as “diabetic”
- Life/travel insurance costs no longer 50% higher

## *For GPs*

- Decrease in demands for medical input yet continued payment
- Application of knowledge of how the body works – rather than just being a pill pusher
- Broader application of knowledge

## *For health systems*

- Identifies a valuable indicator of success in healthcare
- Allows better analysis of long term morbidity and mortality risks
- Tracking of major financial benefit

**Pathophysiology of T2DM is now clear**

***T2DM is potentially reversible in Primary Care***

**Endorsement of definition of remission essential**

**Advise motivated individuals – it is a choice**

# Options for practical roll-out across UK

## Single-practice model

Re-badge some Clinics  
Minimal GP time input –  
stopping medication.

## Establish GP 'hubs'

With regular Diabetes Remission  
Clinics  
Efficiencies and economies

## Staged national roll out

Enrol practices in phases

## Out-source

eg to providers of successful  
DPP systems  
Must include funded training  
for long term weight  
maintenance in Primary Care

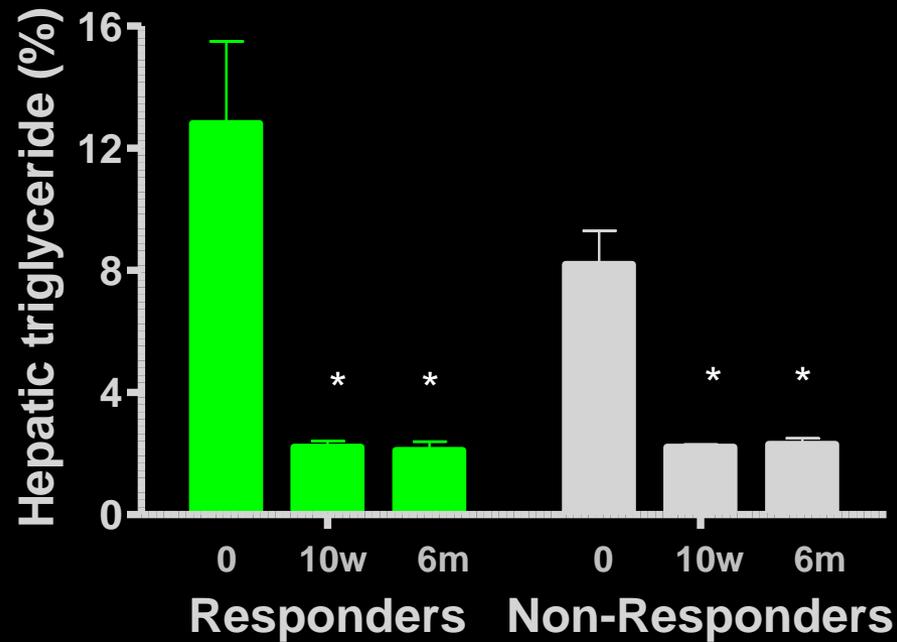

Before

After

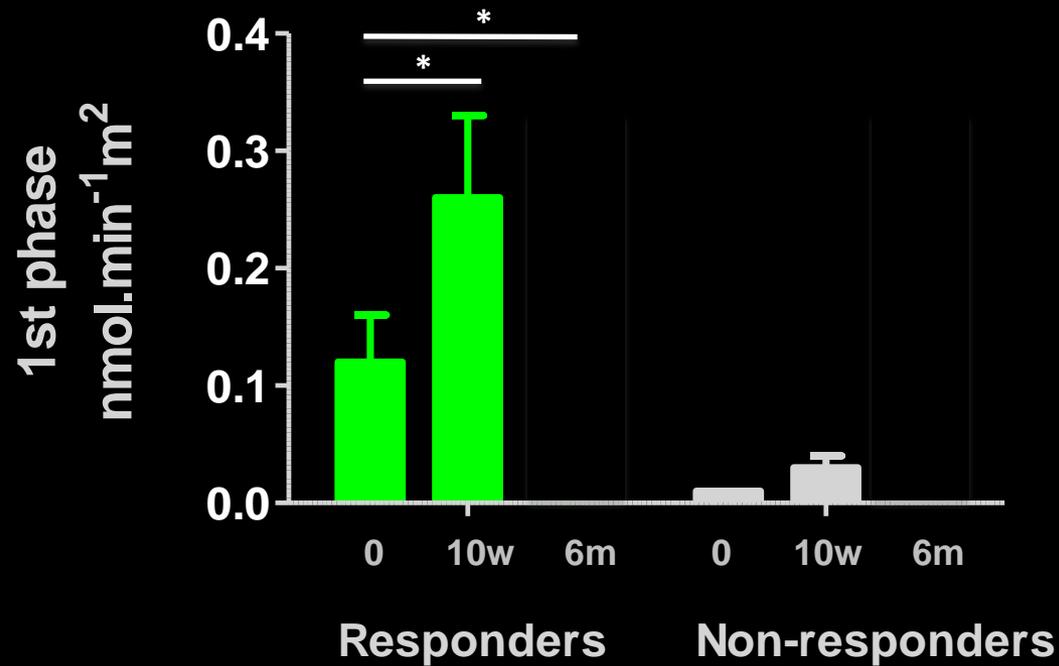

## Counterbalance: Hepatic triglyceride

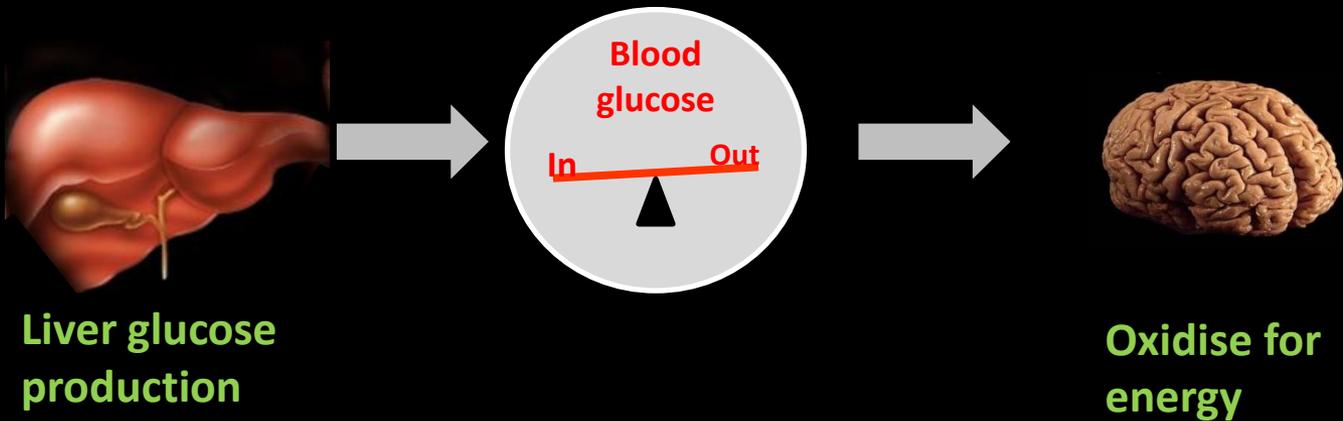

*Steven et al. Diabetes Care 2016 39:808-15*

## Counterbalance: 1st phase insulin secretion

Steven et al. *Diabetes Care* 2016 39:808-15

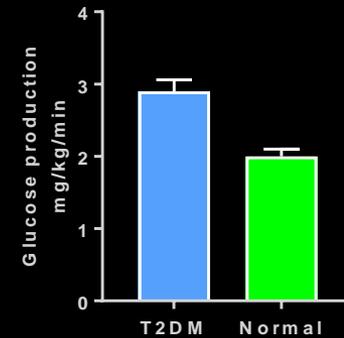

## Staying alive overnight

**Glucose produced by liver in 1 hour during overnight fast:  
Non-diabetic 70kg person**

# Glucose produced by liver in 1 hour during overnight fast: Type 2 diabetes cf. normal

Taylor et al, JCI 1996; Singal et al AJP 2002

## Six hours of liver glucose production in T2DM
